September 2022

THE PROJECT

The main goal of the project is to develop an online gamified environment, making use of the motivational mechanics of games, helping students better engage with their homework while improving their learning outcomes. One of the aims of the project is to make a shift from the traditional learning processes to the digital. The proposed gamified homework environment will allow the creation of gamified experiences, providing a versatile educational tool that encourages its use in all schools.

PROJECT KICK-OFF MEETING

The project kick-off meeting took place on the 4th and 5th of May 2022 at the University of Patras in Greece. Partners had the chance to travel and work face-to-face.

All partners were present and essential project decisions were taken, specializing the project plan constructively and sufficiently to allow detailed implementation work to follow.

General Findings

Greek & Lithuanian students have similar preferences regarding homework assignments, and they seem to have positive perceptions of homework, as they tend to perceive them as learning opportunities. On the other hand, Portuguese students don't have such a positive perception of homework, congruent with literature that states homework assignments are stressful and boring.

Regarding the perception of the courses with the most interesting homework assignments, math and subjects related to sciences are the ones that students (from all countries) choose more frequently. However, math also appears to be the most boring subject for completing homework assignments.

According to students' responses about other game mechanisms that they like, and considering the games they like to play, it is evident that they prefer strategy games.
